

Shadowserver needs your support!

# 2026 ALLIANCE & FUNDING DRIVE

## > ABOUT US

The Shadowserver Foundation is a nonprofit cybersecurity organization whose mission is to make the Internet more secure for the public good. As the **world's largest provider of free cyber threat intelligence**, we collect and analyze data at Internet-scale, then distribute daily network remediation reports to help 9,000+ organizations and 201 National CSIRTs covering 175 countries secure their networks. Our reports act as both an **Early Warning Service**, identifying exposed, misconfigured, and vulnerable devices on a network to be patched *before* a breach occurs, and a **Victim Notification Service**, identifying compromised devices on a network to be remediated before further exploitation, such as a ransomware attack, can occur. We provide **free technical and investigative support to law enforcement** to combat and disrupt cybercrime. We also offer **global cyber capacity building** that teaches defenders to secure networks, process threat data, and disseminate it to constituents for sustained cybersecurity capacity within a country.

## > WHO WE SERVE

Shadowserver serves **201 National CSIRTs** (Computer Security Incident Response Teams) responsible for incident response and network security **in 175 countries**, in addition to **9,000+ organizations globally** across a wide array of sectors, including: hospitals; financial institutions; universities and local school districts; Internet service providers; critical infrastructure to include energy providers and water utilities; sectoral CSIRTs and ISACs (Information Sharing and Analysis Centers); federal, state, and local governments; small businesses to Fortune 500 companies; retail establishments; hotels; automobile manufacturers; airlines; maritime shipping companies; parcel delivery services; food suppliers, grocery stores and restaurants; nonprofits and non-governmental organizations; and underserved regions of the world.

## > FUNDING FACTS

As a nonprofit organization, Shadowserver survives on Alliance Partner fees, donations, grants, and funded projects.

Yet the highly technical nature and global scale of our free public benefit services mean we operate our own data center and require a small but highly-skilled staff, resulting in operating costs totaling \$400,000 per month.

Achieving consistent, sustainable funding is a major challenge, and we cannot do it alone.

**\*Currently, LESS THAN 1% of the 9,000+ organizations we serve provide financial support.**

To continue providing free public benefit services that make the Internet more secure for all, **Shadowserver needs your support!**

## HOW YOUR FUNDING MAKES A DIFFERENCE

Through your support, Shadowserver can continue providing free public benefit services that make the Internet safer and more secure. Here's how your funding makes a difference:

### Early Warning & Victim Notification Reports

Our free, daily network remediation reports provide organizations with **Early Warning** and **Victim Notification Services**. Each detected issue is designated with a **severity level** to prioritize patching and remediation. Our reports include the **latest high-risk vulnerabilities** and **unique data** shared with Shadowserver by law enforcement.

### Law Enforcement Cybercrime Disruption

We provide free technical assistance to many of the world's most significant cybercrime disruption operations. Using our **Victim Notification** capabilities, we help law enforcement notify millions of victims that their devices have been compromised by cybercriminals. We quarantine millions of malicious domains using our special purpose DNS registrar, the **Registrar of Last Resort (RoLR)**. We actively protect millions of victims from further exploitation by disrupting the connection between their malware-infected devices and criminally-controlled servers by redirecting the traffic to our **sinkhole servers**.

### Cybersecurity Capacity-Building Services

We provide cybersecurity capacity building in areas of threat detection, cyber intelligence, and response. Helping to secure networks globally, we reduce the opportunity for cybercriminals to attack your network using compromised proxy networks.

### Funded Public Benefit Projects

Funded projects benefit your organization and the public, including: honeypot sensor expansion; Internet scanning for more device types and vulnerabilities; increased sharing of incident data; and enhancements to our **public dashboard**.

## BENEFITS OF BECOMING AN ALLIANCE PARTNER

### Alliance Partner benefits include:

- Be among the **first to get insights** into new attack observations and vulnerabilities.
- **Interact directly** with our staff and fellow Alliance partners on our secure chat platform.
- **Influence the strategy and prioritization** of our scanning, honeypots, and sinkholing.
- Gain **public recognition** as a cybersecurity leader and valued Shadowserver Partner through social media announcements and the addition of your logo to our website.
